

UAT: Online Payment — Card / PromptPay (F5)

Test on the trial system (the administrator will provide the link and test accounts). · Follow each step on the live screen and compare with the Expected result. · Tick Pass / Fail and add evidence (document number / screenshot) for every step. · When done, sign off at the end of the document. · This set: 22 test cases.

Before you start (Preconditions)

- ☐ The relevant feature / test payment setup has been enabled for you by the system administrator
- ☐ **Settings** → **Invoicing** is fully configured (from F4) and there is at least 1 test member company + an active package
- ☐ There is at least 1 **invoice with status Issued** (e.g. THB 53,500) for the test member
- ☐ Test accounts exist for all 3 roles: admin, manager, member (whose company matches the invoice)
- ☐ The relevant feature / test payment setup has been enabled for you by the system administrator

How to fill in: For each TC, mark **Pass / Fail** in the "Result" field and add evidence (document number / screenshot) in the "Notes" field.

The member-side payment (entering card / scanning PromptPay) is used only to **set up the starting state** for the admin-side TCs — the full member-side UX is covered in the member quick-start UAT.

TC-PAY-01 — Member pays by card → invoice becomes Paid automatically (admin verifies) (1 / 22)

Role: admin · **Condition:** member (set-up) → admin (verify)

#	Step	Expected result
1	member: open the Issued invoice → Pay now → enter card 4242...4242 → pay	Payment-success page appears + receipt can be downloaded
2	admin: open the same invoice on the staff-only page (paste its web address)	Invoice status is Paid without the admin having to record the payment manually
3	Look at the Payment activity card at the bottom of the page	Timeline shows Payment initiated → Payment succeeded → Invoice marked paid in order; performed by System (Stripe)
4	Check the member's receipt email	Receipt (PDF) received within ~1 minute
5	Check the history log	payment_initiated, payment_succeeded, invoice_paid are all present

☐ PASS	☐ FAIL	Notes (charge id): _____
--------------------------------------	--------------------------------------	---------------------------------

TC-PAY-02 — Member pays via PromptPay QR → invoice becomes Paid (admin verifies) (2 / 22)

Role: admin · **Condition:** member (set-up) → admin (verify)

#	Step	Expected result
1	member: open the Issued invoice → Pay with PromptPay → confirm the test-mode confirmation	Portal updates to the payment-success page on its own without needing a refresh
2	admin: open the invoice → Payment activity	Timeline is complete, same as TC-PAY-01; invoice is Paid
3	Look at the payment method on the invoice (Payment details / Method)	Method shows PromptPay , with no card information (last-4 / brand) at all

☐ PASS	☐ FAIL	Notes: _____
--------------------------------------	--------------------------------------	--------------

TC-PAY-03 — Payment activity timeline + Charge id + View in Stripe (3 / 22)

Role: admin

#	Step	Expected result
1	Open an invoice already paid online → Payment activity card	Shows events in time order + who performed each + timestamp
2	Look at the Charge id chip → click Copy charge id	Number is copied to the clipboard + a toast / announcement "Copied"
3	Click View in Stripe	Opens the Stripe dashboard in a new tab (target=_blank) at the matching payment; in test mode there is a Test mode badge

☐ PASS	☐ FAIL	Notes: _____
--------------------------------------	--------------------------------------	--------------

TC-PAY-04 — "Paid online" filter + Method column on the list (4 / 22)

Role: admin

#	Step	Expected result
1	With both online-paid invoices (card + PromptPay) and manually-recorded invoices present → open the invoices list (paste its web address) and click the Paid online chip	Only successfully online-paid invoices remain; a Method column appears
2	Look at the labels in the Method column	Card invoices show Card ; PromptPay invoices show PromptPay
3	Check whether there is a charge-id column in the table	There is no charge id in the table (it lives only in the invoice timeline)
4	Click Clear filters	Filters are cleared, the Method column disappears, and the full list returns

☐ PASS	☐ FAIL	Notes: _____
--------------------------------------	--------------------------------------	--------------

TC-PAY-05 — manager can view the timeline but has no edit actions (5 / 22)

Role: manager

#	Step	Expected result
1	Log in as manager → open an invoice already paid online	The full Payment activity timeline is visible
2	Look for an Issue refund / Record payment button	There are no edit buttons at all (including the record-manually link in the empty state)

☐ PASS	☐ FAIL	Notes: _____
--------------------------------------	--------------------------------------	--------------

TC-PAY-06 — Full refund (requires typed confirmation) (6 / 22)

Role: admin

#	Step	Expected result
1	Open a Paid invoice (paid online, 53,500) → click Issue refund	The " Issue refund? " dialog opens with Amount + Reason + the invoice / receipt number details
2	Enter Amount = 53,500 (= remaining balance), Reason "Duplicate payment"	A field appears asking you to type REFUND {company name} (because it is a full refund); the confirm button is still disabled
3	Type the phrase exactly (matching upper / lower case)	The Issue refund button becomes enabled
4	Click confirm	The button shows Processing refund... → on success: a toast announcing the credit-note number
5	Check the invoice status + credit note + Stripe	The original invoice is Credited , Payment is refunded ; a credit note linked to the original invoice is issued + emailed; Stripe shows a refund
6	Check the history log	refund_initiated, refund_succeeded, credit_note_issued are all present (the change of the invoice to Credited is recorded by credit_note_issued — there is no invoice_credited event)

☐ PASS	☐ FAIL	Notes (credit-note number): _____
--------------------------------------	--------------------------------------	-----------------------------------

TC-PAY-07 — Partial refund (no typed confirmation) + further refund possible (7 / 22)

Role: admin

#	Step	Expected result
1	Open a Paid invoice (53,500) → Issue refund → Amount = 3,500, Reason "Contracted tier adjustment"	There is no typed-confirmation field (partial refund); the confirm button enables when the fields are valid

#	Step	Expected result
2	Click confirm	A credit note for 3,500 is issued; the original invoice is Partially credited ; Payment is partially_refunded
3	Open the same invoice again	The Issue refund button is still there ; Maximum refundable = 50,000

☐ PASS	☐ FAIL	Notes: _____
--------------------------------------	--------------------------------------	--------------

TC-PAY-08 — Refund exceeding the remaining balance is rejected before Stripe is called (8 / 22)

Role: admin

#	Step	Expected result
1	An invoice already partially refunded (50,000 remaining) → Issue refund → Amount = 60,000	The Amount field shows the error " Refund amount exceeds the remaining refundable balance "; the confirm button is disabled
2	(If forced through) check whether Stripe was called	Stripe is not called (rejected by the server's pre-flight check, 409); no history-log entry is produced

☐ PASS	☐ FAIL	Notes: _____
--------------------------------------	--------------------------------------	--------------

TC-PAY-09 — Refund an invoice paid by PromptPay (9 / 22)

Role: admin

#	Step	Expected result
1	Open a Paid invoice paid by PromptPay → Issue refund → full refund + type confirmation → click	Stripe refunds the money back to the original account automatically; the member does not need to enter a bank account number in the portal
2	Check the credit-note flow	Identical to card in every way (credit note + email + Credited status)

☐ PASS	☐ FAIL	Notes: _____
--------------------------------------	--------------------------------------	--------------

TC-PAY-10 — manager cannot refund (no button + API 403) (10 / 22)

Role: manager

#	Step	Expected result
1	manager opens a Paid invoice paid online	There is no Issue refund button
2	Call the refund-initiate endpoint directly with a	Responds 403 (no credit note issued, no

#	Step	Expected result
	manager session	refund)

☐ PASS	☐ FAIL	Notes: _____
-------------------------------	-------------------------------	--------------

TC-PAY-11 — Stripe refund fails → no credit note issued (all-or-nothing)

(11 / 22)

Role: admin

#	Step	Expected result
1	Simulate the refund failing on the Stripe side (e.g. test fixture / insufficient balance) → click Issue refund	The dialog stays open + shows a clear error (e.g. "Payment processor temporarily unavailable"); the button becomes clickable again
2	Check the invoice + credit note	No credit note is issued; the invoice status is unchanged ; history log shows refund_failed with a reason code

☐ PASS	☐ FAIL	Notes: _____
-------------------------------	-------------------------------	--------------

TC-PAY-12 — Card declined → invoice stays Issued + bilingual message (admin verifies)

(12 / 22)

Role: admin · Condition: member (set-up) → admin (verify)

#	Step	Expected result
1	member: pay with the declined card 4000... 0002	A bilingual message (TH+EN) appears advising to try another card; the invoice stays Issued
2	admin: open the invoice → Payment activity	Timeline shows Payment initiated → Payment failed (no Invoice marked paid)
3	Check the history log	payment_failed with a reason code is present; no card number anywhere in the log / history

☐ PASS	☐ FAIL	Notes: _____
-------------------------------	-------------------------------	--------------

TC-PAY-13 — Paying an invoice already voided/paid → auto-refund + history entry

(13 / 22)

Role: admin · Condition: admin + member

#	Step	Expected result
1	member leaves the payment page of an Issued invoice open → admin records payment / voids	The system rejects in pre-flight or auto-refunds the full amount via Stripe

#	Step	Expected result
	that invoice → member then clicks pay	
2	admin: check the history log	payment_auto_refunded_stale_invoice or payment_auto_refunded_concurrent_manual_mark is present + an admin notification

☐ PASS	☐ FAIL	Notes: _____
--------------------------------------	--------------------------------------	--------------

TC-PAY-14 — A duplicate payment confirmation does not pay / receipt / log twice (14 / 22)

Role: admin · **Condition:** admin (verify) + Stripe CLI

#	Step	Expected result
1	Pay 1 invoice successfully → resend the same confirmation from the card/PromptPay provider (same event id) again	The payment confirmation responds 200 but does nothing
2	Check Payment activity + email + history log	No duplicate payment_succeeded, no duplicate receipt/email, no duplicate history entry

☐ PASS	☐ FAIL	Notes: _____
--------------------------------------	--------------------------------------	--------------

TC-PAY-15 — A payment confirmation with a wrong signature is rejected 401 (15 / 22)

Role: admin · **Condition:** HTTP test · **Performed by:** system administrator (technical step)

#	Step	Expected result
1	Send a payment confirmation with a wrong / missing signature	Responds 401 before the body is parsed; no status changes anywhere; records webhook_signature_rejected

☐ PASS	☐ FAIL	Notes: _____
--------------------------------------	--------------------------------------	--------------

TC-PAY-16 — Out-of-band refund is detected + rejected (16 / 22)

Role: admin · **Condition:** admin (via Stripe dashboard) → admin (verify in the system)

#	Step	Expected result
1	Click Refund directly in the Stripe dashboard (not through the system) on an online-paid invoice	Stripe sends a charge.refunded confirmation back
2	Check in the system	No credit note is issued, the invoice status is unchanged ; records

#	Step	Expected result
		out_of_band_refund_detected (charge id + processor refund id) + an admin notification with a runbook link

☐ PASS	☐ FAIL	Notes: _____
-------------------------------	-------------------------------	--------------

TC-PAY-17 — kill-switch turns off online payment (config) → member-side fallback (17 / 22)

Role: admin · **Condition:** config administrator → member (verify)

#	Step	Expected result
1	Turn off online payment in the config	Takes effect within 1 request cycle (cached no longer than ~60 s); history log shows online_payment_toggled
2	member opens an Issued invoice	There is no Pay now button; an " Online payment unavailable " card is shown + a Contact administrator button (mailto to admin with a subject referencing the invoice number)
3	Turn it back on → member opens a new invoice	The Pay now button returns

☐ PASS	☐ FAIL	Notes: _____
-------------------------------	-------------------------------	--------------

TC-PAY-18 — Test mode and live mode are strictly separated (18 / 22)

Role: admin · **Condition:** payment-confirmation test

#	Step	Expected result
1	Send a confirmation from the wrong environment (e.g. a test event to a live-configured endpoint, or vice versa)	Rejected; records payment_environment_mismatch; the invoice does not change status

☐ PASS	☐ FAIL	Notes: _____
-------------------------------	-------------------------------	--------------

TC-PAY-19 — tenant isolation: cannot pay / refund / view across tenants (19 / 22)

Role: admin · **Condition:** member/admin of tenant A

#	Step	Expected result
1	A tenant A user tries to view / pay / refund a payment of tenant B (via the UI or direct API)	Rejected on every path (both app layer + database isolation); records payment_cross_tenant_probe

☐ PASS	☐ FAIL	Notes: _____
--------------------------------------	--------------------------------------	--------------

TC-PAY-20 — No card data (PAN/CVV) leaks into DB/log/history (PCI) (20 / 22)

Role: admin · **Condition:** compliance reviewer

#	Step	Expected result
1	After a successful card payment → scan DB rows, logs, history payload, error reports	No full card number (PAN), CVV, or track data found; only token id, last 4 digits, brand, and expiry month/year are stored
2	Check that card entry goes through the Stripe form	Our server never receives card data (preserving SAQ-A)

☐ PASS	☐ FAIL	Notes: _____
--------------------------------------	--------------------------------------	--------------

TC-PAY-21 — admin cannot pay on behalf of a member (21 / 22)

Role: admin

#	Step	Expected result
1	admin calls the payment-initiate endpoint for a member's invoice	Responds 403 (admin-impersonate-pay is out of MVP scope)

☐ PASS	☐ FAIL	Notes: _____
--------------------------------------	--------------------------------------	--------------

TC-PAY-22 — Open the refund dialog from the command palette (? refund=1) (22 / 22)

Role: admin

#	Step	Expected result
1	command palette → search Issue refund → select (takes you to the invoice page with ? refund=1)	The refund dialog opens automatically
2	Close the dialog (Cancel / Esc / click outside) then refresh	?refund=1 is cleared from the URL; the dialog does not pop up again

☐ PASS	☐ FAIL	Notes: _____
--------------------------------------	--------------------------------------	--------------

Summary & sign-off (F5 Online Payment — admin)

Item	Value
Total number of TCs	22
Passed	_____
